Bar Code Scanner

Fixfocus

Advanced line

Compact but powerful

The new bar code scanners CLV 430, CLV 431 and CLV 432 represent the newest members of our high performance scanner family using fixed optics, large reading distance and great depth of field. This all comes in a very compact and robust housing with IP 65 protection. These scanners were designed by incorporating innovative features into a miniaturized package size. SMART Code recognition technology leads to a definite increase of first good read rate. The Reflector Polling feature eliminates the necessity of additional photoelectric triggering switches. Additional variants, such as angled or oscillating mirror versions, provide solutions for special requirements, such as reading bar codes on large areas.

Benefits:

Oscillating mirror

Additional variants, such as angled and oscillating mirror versions, provide solutions for special requirements, such as reading bar codes on large areas.

Oscillating mirror

The oscillating mirror enables the CLV to deflect the scan line so that it is perpendicular to the scanning direction. By doing so, the CLV can identify bar codes in large areas.

Various operating modes are provided:

■ **Free selectable angular position:**

The oscillating mirror can be positioned at any angle.

■ **Oscillating mirror with variable deflection range:**

Deflects the scan line up to the amplitude setting (max. $\pm 20^\circ$).

■ **One shot:**

Single oscillating movement for each reading gate, comprising one forward and return phase of the oscillating mirror.
