Process module digital output PMO transistor

CE

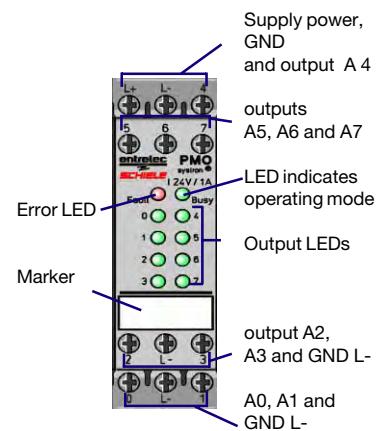

- 8 transistor outputs
- 24 V DC / 1 A
- Total current max. 4 A, short-circuit and overload proof
- Electrically isolated in groups of 8
- Internal power consumption max. 40 mA, external 25 mA at 24 V DC + load

Operation

The digital output modules PMO are used to convert signals arriving by bus and bus module and to control actuators on site. The presence of external supply and short circuit/overload are monitored, displayed by LED, and passed on to the bus module. The outputs of the transistor module are short-circuit proof.

Power consumption	
Internal (derived from PM)	max. 25 mA
External (120 VAC 60 Hz, no load) / (230 VAC 50 Hz, no load)	max. 20 mA / max. 14 mA
Other characteristics	
Voltage withstand:	
Extern. Connections L, N, 0...7 against internal acc. VDE 0160	2,5 kV
Operating temperature	0°C to +55°C
Storage temperature	-25°C to + 75°C
Degree of protection	IP 20 / IP 50
Terminals, screw	14 AWG (2.5 mm ²), stranded, 12 AWG (4 mm ²), solid
Weight	0.49 lb (0.22 kg)
Dimensions (WxHxD)	45 x 82.5 x 100 mm

Operation

The digital output module PMO AC is used to convert signals arriving by bus and bus module and to control actuators on site. The presence of an external supply and fault behavior is monitored and displayed on the module. The outputs are protected with an internal fuse. Zero Crossing Detection is used on the output Triac command.

Design

Approvals:

Maximum configuration

- 6 Bus module Schiele I/O bus
- 4 Bus module RS232 / RS485

Process module analog input PMAI 10 V / 20 mA

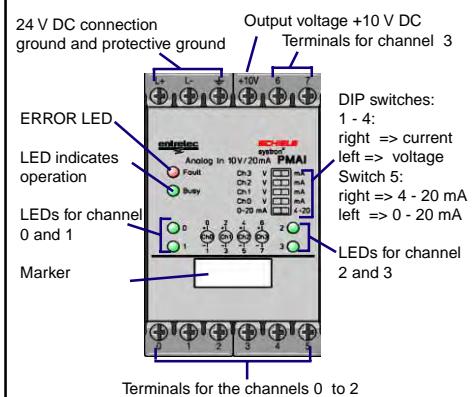

- 4 channels, 12 bit resolution
- Selectable: 0 ... 10V, 0 ... 20 mA or 4 ... 20 mA
- Electrical isolation between CPU and external supply
- Internal power consumption 80 mA, external 60 mA at 24 V DC

Operation

This analog input module converts signals directly on site and transfers them via ribbon cable to the bus module. Interference-prone transmission of analog values over long distances thus become unnecessary.
